**Subject:** Using Google Satellites to Fight Illegal fishing

FYI

SkyTruth, Oceana and Google have announced Global Fishing Watch, a big data technology platform that leverages satellite data to create the first global view of commercial fishing. On November 14, 2014, a prototype was unveiled at the 2014 IUCN World Parks Congress in Sydney, Australia, with a public release version in development. Global Fishing Watch will ultimately give citizens a simple, online platform to visualize, track and share information about fishing activity worldwide.
